Foreword

In 2017, the National Council for Population and Development (NCPD) developed the Kenya

Demographic Dividend Roadmap which was domesticated from the African Union roadmap. The

purpose of the roadmap is to guide in identifying priority activities under the sectors of health,

education and skills development, employment and entrepreneurship, and governance that

should be implemented for the attainment of demographic dividend. These activities have been

incorporated in the Medium Term Plan III (2018 - 2022) and the 2nd County Integrated

Development Plans (2018 – 2022) as part of the process of actualizing the Kenya Vision 2030. To

achieve this objective, the county specific demographic dividend guideline have been developed

to provide a pathway through which counties can harness the potential of its youth for faster

socio-economic development and improvement in the quality of life for all citizens.

One of the critical challenges that Kenya faces is ensuring that the large population of youth are

healthy, educated, skilled, and actively engaged in economic activities. A significant number of

young persons lack education and skills that will enable them access employment and income

opportunities. Others have health problems associated with their reproductive health choices.

These challenges need to be addressed if the youth are to contribute to the achievement of Kenya

Vision 2030 and attainment of the demographic dividend.

The main aim of the County specific demographic dividend guideline is to help the counties

harness the DD by implementing the demographic dividend component in County Integrated

Development Plans and drive the country towards realizing the aspirations of Vision 2030. It is

my hope that implementation of this guideline will contribute to improving the socio-economic

status, health and wellbeing of young people and Kenyans as a whole.

Dr. Josephine Kibaru-Mbae, OGW

Director General

NCPD

June, 2019

3

Acknowledgement

The National Council for Population and Development is grateful for the contribution made to

the development of this document by the following members of the Technical Working Team;

Henry Onyiego - Ministry of Health, Edwin Njue - State Department of Planning; Economic

Development Coordination Directorate, Jackson Alwanga – Ministry of Public Service, Youth and

Gender, Dr. Nurudeen Alhassan – AFIDEP, Nzomo Mulatya, Jane Wanjaria, Fidelis Ndung'u Irene

Muhunzu, Stephen Ndambuki and Moris Gitonga – NCPD. My special thanks go to Dr. Josephine

Kibaru-Mbae (Director General), Mrs. Margaret Mwangi (Director Corporate Services) for their

invaluable contribution and Mr. Nzomo Mulatya (Deputy Director Programme Coordination) for

his leadership in the development of the guideline.

My appreciation also goes to Mr. Philip Aswani who provided administrative support to the team

during the development of this guideline. Last but not least, I wish to appreciate the NCPD Senior

Management and Technical Team for their very valuable input to the guideline.

NCPD appreciates the support and guidance the Council of Governors (COGs) provided during

the process of developing this County DD implementation guideline. Specifically, the guidance

and opportunity that enabled NCPD to incorporate the issues on demographic dividend into the

guideline. Most importantly, I acknowledge the Government of Kenya through The National

Treasury and Planning for the financial support towards the development of this guideline.

Peter Nyakwara

Director Technical Services

SMEs - Small Medium Enterprises

UNFPA - United Nations Population Fund

MOH - Ministry of Health

1. Introduction

Demographic dividend (DD) is the accelerated economic growth that may result from a rapid decline in a country's fertility and mortality levels and subsequent change in the population age structure. It is occasioned by strategic investments in key sectors including education, health, economic and Governance. In recent years, the demographic dividend has been fronted as a solution to the myriad of problems being experienced by developing countries. The devolved system of government in Kenya presents an opportunity to accelerate the realization of demographic dividend. The primary objective of the devolution is to promote social and economic development and the provision of proximate and easily accessible services. Harnessing the demographic dividend in the 47 counties by investing in young people will help to address development challenges which include high unemployment levels, high incidence of poverty, migration from counties in search for better opportunities, low education levels, high mortality and morbidity incidences, and criminal activities among the youth.

Kenya's demographic dividend model shows that Kenya's DD window of opportunity opens in 2038 and the country could achieve the following results by 2050 through implementation of activities aimed at achieving the demographic dividend: Investments per capita will increase to about US\$ 2,000 from the current figure of about US\$ 200; Fertility levels will decline to an average of 2 children per woman from the current 4 children per woman thereby decreasing the dependency ratio: Even with an increase in the population size, the employment gap (i.e. people in the labour force who are not active) will be 8 million which is less than the current gap of 10 million. These results are consistent with the aspirations of Kenya Vision 2030.

The DD model also shows that counties are at different levels with regard to the window of opportunity for achieving DD. Since the opportunities for investments varies across counties, this county specific DD guideline provide a framework of key performance indicators and baseline to guide county governments in coming up with specific demographic dividend priority actions that need to be undertaken in each of the DD sectors to harness demographic dividend: (i) Economic (ii) Education and Skills Development (iii) Health and Wellbeing and (iv) Governance. The demographic dividend concept advocates for strategic investments in health,

education, economic and governance with a view of ensuring that the population of young people is healthy, well-educated, trained for the job market, and economically engaged in a well governed environment.

2. Situation Analysis and Suggested Interventions

In 2015, NCPD conducted a National Youth and Adolescent Survey to create more data at the local level to inform county-specific policies for achieving the demographic dividend. The main objective of this survey was to identify key health, education, economic and governance issues at county level that adversely affect the youth and which therefore need to be addressed for the country to harness the demographic dividend. In 2017, NCPD developed the Kenya demographic dividend roadmap to guide in identifying priority activities under the sectors of health, education and skills development, employment and entrepreneurship, and governance that will enable the country attain a demographic dividend. These activities have been incorporated in the Medium Term Plan III (2018 – 2022) and the 2nd County Integrated Development Plans (2018 – 2022) as part of the process of actualizing the Kenya Vision 2030.

To achieve this objective, this county specific demographic dividend guideline have been developed to provide a pathway through which counties can harness the potential of its youth to spur socio-economic development and improvement in the quality of life. The guideline present an overview of the key demographic, health, education, economic and governance indicators including cross-cutting issues of the 47 counties and suggested interventions and opportunities that exist for harnessing the benefits of a growing youth population. The main sectors whose performance is critical in harnessing the potential of the young people in accelerating economic growth and development include;

(i) Economic

In Kenya, it is estimated that every 100 working-age adults support 81 dependents, which limits the amount of income families are able to save and invest. Additionally, Kenya's low gross domestic product (GDP) per capita of US\$900 has contributed to increased family poverty and economic inequalities. The economic pillar focuses on creating an environment where educated and skilled youth can find well-paying jobs or self-employment. Economic policies must target job creation in areas that have potential for longer term returns, including technical and vocational education, agriculture and technology.

Indicators: Dependency Ratio, Proportion of Population in the working ages (15-64), Youth Employment, Poverty Levels

(ii) Education and Skills Development

Investment in quality education and appropriate skills will enable youth to participate in the economy and provide needed labour.

Indicators: ECD Net Enrolment Rate, Primary School Net Enrolment Rate, Secondary Net Enrolment Rate, Primary School Pupil-Teacher Ratio, Secondary School Student-Teacher Ratio, Number of Primary School Age Children Out of School, Number of Secondary School Age Teenagers Out of School.

(iii) Health and Wellbeing

Health and Wellbeing pillar puts emphasis on Investment to ensure Universal access to quality healthcare including reproductive health.

Indicators: Average number of births per woman, proportion of women using contraception, prevalence of teenage pregnancy, children 12-23 months fully vaccinated, children under 5 who are stunted, children under 5 who are wasted, HIV prevalence, skilled births delivery.

(iv) Governance

Governance pillar calls for favorable policy environment for fostering sustainable investments in health, education and economic empowerment.

Indicators: Corruption, Youth Participation

2.1 Economic Pillar

An economic policy environment that fosters job growth and attracts investment is vital to the achievement of Vision 2030 goals and the demographic dividend. By supporting domestic industries, improving market efficiency and strengthening governance of public institutions, GDP per capita will be more than 12 times higher by 2050. Nearly 90 percent of the workingage population will be employed (2018 Economic Survey). To accelerate harnessing the DD, counties have to foster sustainable investments in economic empowerment by reducing reliance on imports and investing in the production of local and homegrown goods. Improve the flexibility and efficiency of the labor and financial markets by reducing taxes on new businesses, improving labor-employer relations, and lowering collaterals for credit facilities. Invest in the ICT sector to improve Internet and mobile phone infrastructure (NCPD, 2017 DD Roadmap). **Table 1** presents the economic indicators and suggested interventions.

2.2 Education and Skills Development Pillar

Investments in high-quality education and training generate a skilled workforce that meets the needs of the changing labor market requirements, which in turn raises people's incomes and improves economic development (2015 NAYS). The pillar looks at reducing dropouts and increasing secondary school completion rates, especially for girls. Studies have shown that girls' education, particularly at the secondary school level, and empowerment, will reduce early marriages and slow adolescent fertility (2014 KDHS). Cultural, social and economic barriers that hinder empowerment of girls and women in certain counties should be addressed.

Proposals include re-establishment of mid-level colleges to prepare workers with necessary technical skills in addition to those of university-educated workers, reducing the barriers and costs of tertiary education and put educational programs in place that prepare students for

the twenty-first century labor force. **Table 2** presents the education pillar and suggested key actions.

2.3 Health and Wellbeing

The Health Pillar **(Table 3)** calls for investments in universal access to quality health care including reproductive health. These include improvements in the health and nutrition of girls, women and children. Family planning is critical to attaining the Vision 2030 goal of improved quality of life, and sets the stage for Kenya's demographic dividend *(2012 PPND)*. Reductions in fertility coupled with child and maternal mortality declines are all associated with a greater power for women to make decisions about how many children they want and how to raise them *(2017 Kenya DD Roadmap)*. As they stop spending their most productive years bearing and raising children, they can enter the workforce and contribute to economic production.

2.4 Governance Pillar

County governments must put in place fiscal policies and governance reforms that enhance savings,

foreign direct investment (FDI) and ensure efficiency and accountability in use of public resources (GoK 2018 CIDPs 2018-2022). Reduce corruption in public institutions by addressing the irregular payments that are often required for services. **Table 4** presents governance issues and suggests the need to have strong accountability mechanism and proper coordination of management of public funds. Without good governance counties will not be able to achieve their medium- and long-term development aspirations and the demographic dividend.

3.0 Conclusion

The demographic dividend is not an automatic event that happens overnight—it's an accumulation of economic gains that accrue over many years as the population age structure changes to include more working-age people and the requisite investments are made in human capital development and job-oriented economic reforms. A starting point for the counties is facilitating a rapid, voluntary decline in fertility by ensuring universal access to family planning that is reinforced by female education. Experiences from the Asian Tigers and other African countries show that it is possible to increase contraceptive use and reduce fertility considerably over the coming decades. Kenya's commitment to the FP2020 programme is a major positive step, but much more must be done to operationalize the political will and ensure universal access to high quality contraception. The country also needs to increase the empowerment of women and female education to curb the high number of pregnancies among school dropouts and teenagers, which will help reduce overall fertility.

Counties can benefit from the demographic change through smart policies and smart investments in education, health, governance and economic empowerment. Implementing a multi-sectoral and long-term policy agenda requires a collaborative and coordinated approach. The counties are well-positioned to emulate the development miracle that the Asian Tigers achieved.
